The best IT and Telecommunications
systems **integrator**

THE COMPANY

Inovax Engenharia de Sistemas Ltda. is a Brazilian IT and Telecommunications company operating in the system integration industry in Brazil since 1989.

It was initially structured to reach the position of a cutting-edge engineering company, establishing important business partnerships for development and integration of solutions using products of strategic partners, focused on delivering IP and optics communication networks, storage systems, cloud computing and real-time communication, metering and IoT solutions.

With the goal of becoming the best option in the market when offering solutions and implementing mission critical projects, Inovax has strategic partners, focused on supplying telecommunications solutions for professional use of high availability and performance, and provides technical assistance nationwide, meeting demands from the 27 capitals. Our specialized project engineering team is located in São Paulo, with administration offices in Rio de Janeiro and various other operation points in strategic locations throughout Brazil.

VISION

To be an organization with an innovative culture, with technological dominion, actions based on ethical principles and with a prominent role in Information and Communication Technology.

MISSION

Provide innovative solutions for critical missions in Information and Communication Technology, focused in customer satisfaction.

PHILOSOPHICAL VALUES

LONG-TERM RELATIONSHIPS

Inovax

Leading company in critical mission projects in IT and Telecommunications in Brazil, Inovax has great expertise in providing solutions to the financial, corporate, public and education markets, using proprietary methods and know-how in order to address advanced requirements. Currently, technical assistance is provided for the entire country, servicing the 27 capital cities.

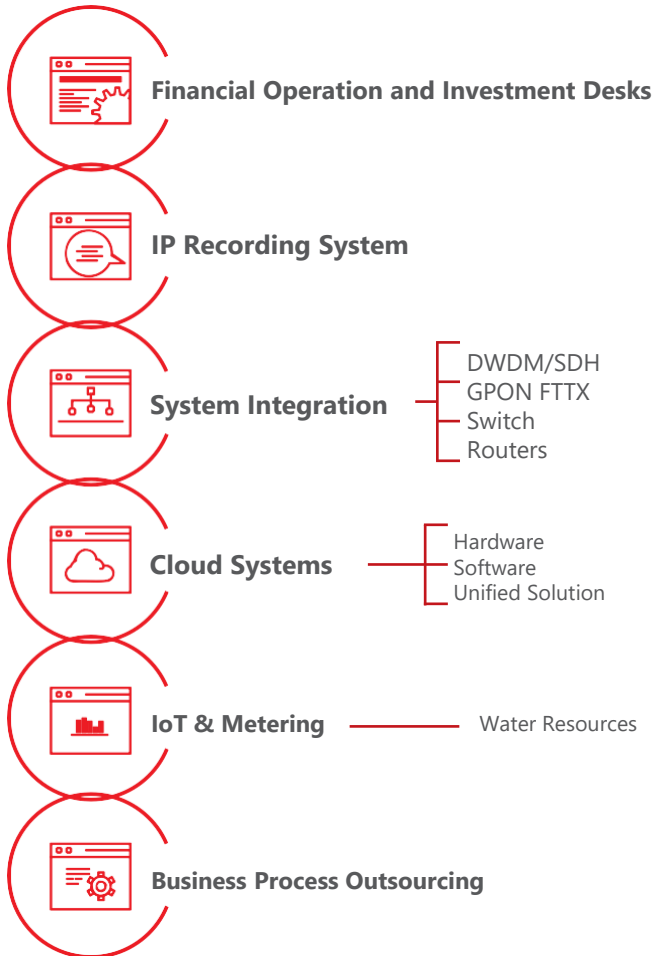

Quality Policy

Inovax has a quality policy that aims at materializing the company's Vision, fulfilling its Mission according to the Values shares by all of its Employees.

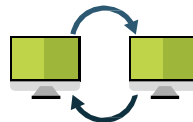

Therefore, Inovax seeks to:

- 1** Promote team and company spirit;
- 2** Foster a work environment that stimulates learning;
- 3** Promote transformative questioning in order to achieve process improvement;
- 4** Meet the needs of our customers to provide better service;
- 5** Promote self-reliance with full responsibility at all levels;
- 6** Favor the factual approach when it comes to decision-making in processes;
- 7** Strive for mutual trust with customers and suppliers through transparency and partnership in relationships.

Products

Transmission and IP Networks

For integration of telecommunication networks that use the Internet Protocol (IP), Inovax makes use of the following solutions:

IP Multimedia Solutions

Inovax provides solutions multimedia IP, such as installation of telephone lines and ethernet ports, to customers of all sizes, in all industries.

Cloud Computing

Inovax provides the best cloud computing solutions for company cost reduction and maintenance, and for allocating more resources to innovation.

Skills

Inovax provides the highest quality services covering areas such as design of electronic systems and circuits, embedded software, command and control, monitoring and security, VoIP communication systems, SIP communication stacks, contingency website and information and communication systems in general.

Design and Consultancy

Project and Contract Management

Import, Logistics and Implementation

Support, Maintenance and Operation

Critical Mission Systems

Inovax maintains strategic partnerships with important market players in order to offer the best solutions to its customers.

Inovax Solutions

Decision Centers - Financial Operation Desks | Command and Control

A leading company in products and projects for IT and Telecommunications critical missions, Inovax has already installed its solution for a Telephone Operations table in dozens of financial institutions and thousands of operation points, recording channels and private and public lines in Brazil. Our solution includes a distributed platform for contingency, operation, management and integrated recording system. Reliability is our main objective, this is why we are installed in banks, brokers and financial market distributors, pension and social security funds, and operation and control centers for power distribution company centers located in Brazil and abroad.

Telecommunication Network Solutions

With proven expertise in designing, implementation and support of ITC solutions, Inovax has provided, installed and configured over 100,000 access devices and over 2,000 equipment units and systems comprising active network elements and high availability storage, processing and capacity for private and public institutions, such as: servers, switches, routers, firewall, terabit routers and others. Its applications are diverse and may be used in Data Centers, telecommunication networks, surveillance, operation and control systems, databases, etc.. Inovax's staff is trained and specialized to work in technical support and assistance in the country.

OpenStack and Cloud Management

Inovax specializes in implementing state-of-the-art technology and is always aware of the main market trends of the national and international market. Through strategic partnerships, Inovax implemented Cloud environments (IaaS) in public and private institutions. Our solution includes the entire hardware and operation system for automatic large-scale storage provisioning and virtual high availability OpenStack cloud machines, totally redundant network architecture, high capacity for virtualization of machines and network functions (NFV), with Software Defined Storage (SDS) and Software Defined Network (SDN) solutions, backup and restore features for critical components, in addition to transfer of knowledge, tech support and warranty.

CDC (Container Data Center)

In order to address the increasing demand for implementation of Technological Infrastructure, Inovax provides, implements and renders consultancy to implementation projects for various Container Data Center (CDC) solutions in safe environments. Our modular solution addresses any agility and speed requirements applicable, and includes high capacity disk systems, monitoring, management, cooling and firefighting systems, no-break and generator group, fully redundant and warranted, including use training and technical maintenance.

GPON Network (Gigabit Passive Optical Network)

Also featured in the high speed internet infrastructure segment, Inovax performs engineering works and services for activation, maintenance and management of fiber optics networks for Internet providers subscribers with GPON technology (high speed data transmission). Inovax monitors management and performance of network implementation services through the TKSS platform, in addition to providing materials and equipment for over 20,000 subscriber points. BPO services (Business Process Outsourcing) provided by Inovax include areas for connectivity, processing, storage and safety of information, operation and business management, allowing the customers to retain focus on its core business.

IoT- Internet of Things

Inovax provides specialized systems for Smart Metering solutions, taking metering and processing methods for resource management in distribution of water, gas and power into a whole new level. Application of new technologies and processes, that enable reduction of losses and increase efficiency in charging and management processes, is the way to go in order to ensure competitiveness for power companies, helping in fulfilling social and environmental responsibility requirements, as well as watching over scarce natural resources.

Business Process Outsourcing (BPO)

In face of increasing reliance in technological sector businesses, and increasing technology complexity, companies are seeking solutions to increase competitiveness and retain focus in their respective core business. Inovax's Technological BPO aims at fulfilling this role, structuring operation process and use of technology in support of the business. The market has been evolving from a more old-fashioned view, from acquiring assets and internal qualification, to a more modern view that involves outsourcing of business processes, generating more value on several levels for companies and society in general. Inovax strives to achieve a better position, with its BPO product, in order to make the best use of its know-how in IT and Communication Technology to generate more value to its clients.

Specialized Services
